ENNOV CLINICAL SUITE

Ennov eTMF

Electronic Trial Master File

The solution built to enable efficiency, compliance and inspection readiness – whether you are a large pharma company, a small biotech just starting your first trials, or a CRO.

The eTMF Challenge

eTMF is a non-negotiable regulatory requirement. But with every new study, more and more resources are needed to plan the TMF, upload and quality check documents, and monitor TMF health.

Your eTMF should be designed to plan, maintain and archive a high-quality TMF while minimizing your operational burden and need for resources. Ennov's eTMF combines unified and streamlined processes and intelligent automation to reduce your operational burden.

Imagine an eTMF that plans your studies based on their unique characteristics. Ennov eTMF generates the document placeholders you need, tagged with the information users need to file accurately. Documents are uploaded in a moment, and QC processes optimized to achieve the best results with the fewest resources.

Dashboards and micro-alerts help users in each role to understand their tasks and priorities at a glance. TMF health becomes a team effort.

The Only eTMF with Basic CTMS

Some organizations need an eTMF now, but aren't ready for a Clinical Trial Management System (CTMS) project. Ennov eTMF includes the ability to manage information about studies, countries, sites, visits, investigators and other site personnel, IRBs/IECs, and other committees. Smart Templates automatically plan the documents required in your TMF each time a new entity is created.

Basic CTMS also includes the automated generation of monitoring visit reports. Basic CTMS can be upgraded to Ennov's full CTMS, or you can integrate the CTMS of your choice – at the same time as your eTMF project, or later when you are ready.

Key Benefits

- Provide access to business users worldwide – including CRO or sponsor partners
- Ensure completeness and inspection-readiness with automated planning processes and one-click dashboards
- Support hands-on TMF inspections by health authorities
- Streamline upload and QC – fewer steps, faster processing, less resources
- Easy to navigate - find any document in your study in just a few clicks

Important Features

- TMF Reference Model ready configuration – adaptable to your needs
- Smart Templates that automatically plan the contents of your TMF based on specific conditions of your study
- Streamlined drag and drop upload process
- Risk-based, sampled and tracked QC process
- Extensive collection of out of the box dashboards and reports to drive inspection readiness and reduce risk
- Complete authoring, approval and electronic signature capability

Cloud-based or On Site

Multi-Platform

Over 200 Life Sciences Companies Around the World Use Ennov Software

Transparency + Insight Support Optimized Processes

eTMF health is as much about the documents you are missing as it is about the quality of the documents you do have. Ennov eTMF provides the planning processes you need to precisely define the documents you need for each trial – without cumbersome editing of document lists. Insights into completeness, quality and timeliness allow you to adjust your TMF for accuracy and efficiency as the trial unfolds. And our dashboards don't just display information – they help you understand priorities, issues, and risks.

Why Choose Ennov?

Hundreds of companies trust Ennov

- **Over 15 years of experience providing Clinical solutions**
  200+ life sciences customers, many more in other industries.
- **Modern architecture and user interface**
  100% web-based, Highly scalable. User-centric design.
- **Our commitment to your success**
  Very high customer satisfaction. 98.5% of projects delivered on time and within budget.

Providing you freedom of choice

- **Available as cloud-based or on-premises deployment**
  You can switch between deployment options at any time.
- **We make you autonomous**
  System configuration and management require no IT skills.
- **Improved security and optimized performance**
  Data is hosted locally for total flexibility. Single tenancy minimizes business interruptions
