

ENNNOV QUALITY SUITE

Ennov QMS

Unified Quality Management Software

Designed for regulated Life Sciences teams, Ennov's quality management software digitizes and standardizes processes while helping organizations maintain inspection readiness.

The Quality Process Management Challenge

Managing quality processes across sites, teams, and systems can quickly become difficult in highly regulated environments such as Life Sciences. When deviations, CAPAs, complaints, and change controls are handled through paper, spreadsheets, email, or disconnected tools, teams lose visibility, consistency, and time. That makes it harder to enforce SOPs, maintain traceability, and stay inspection ready.

Standardized Quality Process Management

Ennov QMS helps Life Sciences organizations manage quality processes in a more structured, consistent way. It digitizes and standardizes core workflows such as deviations, CAPAs, change control, complaints, audit findings, product recalls, and other operational quality activities, helping teams strengthen governance and maintain control across the quality system.

Available as either a preconfigured solution or a fully configurable system, **Ennov QMS** gives organizations the flexibility to adopt proven best practices or tailor processes to their own operating model. Configurable forms, workflow steps, and business rules make it possible to align workflows with internal procedures while capturing the right information at each stage.

Teams can route tasks to the appropriate reviewers and approvers, and track ownership, status, and deadlines in one place.

> CORE CAPABILITIES

- Graphical workflow designer
- Workflow engine with support for sub-processes
- Visual forms editor
- Adaptive forms that adjust by workflow step & user role
- Manual or automated task execution
- Real-time monitoring with dashboards & reporting
- Full-text and metadata-based search
- REST API for advanced integration & automation

> KEY FEATURES

- Integrated worklist dashboard
- Configurable workflows, metadata, & views
- Automated email notifications
- Intuitive user interface
- Preconfigured for common quality processes
- Natively connected to other Ennov solutions
- 21 CFR Part 11 compliant
- 100% web-based

Cloud Based or On Premises

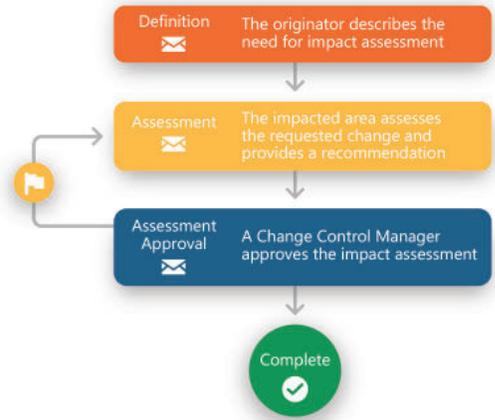

Multi-Platform

ISO 9001 and 27001 Certified

Unified Quality Management Across Compliance Functions

As part of Ennov's unified compliance platform, **Ennov QMS** works within a common environment for quality processes, documents, data, training, and reporting. With a harmonized data model and shared user experience across applications, organizations can reduce redundancy, improve cross-functional visibility, and manage compliance more consistently across quality, regulatory, and operational teams.
